KSF1000-010

More than just an oil can!

Superior Design in a Small Package

Designed for adequate fluid dwell time for cooling and de-aeration under all racing conditions while improving fluid cooling and minimizing pump starvation and cavitation under hard cornering conditions.

Internal Filter

The internal filter traps debris from the incoming (return) fluid to increase pump and steering gear life. The filter also reduces return fluid turbulence and vortexing while improving cooling.

Vented Cap

The vented cap allows for fluid expansion to improve pump seal life.

Optimum Inlet/Outlet Size and Location

The outlet size is #10 JIC 37°, and is located on the side and near the bottom. This reduces inlet vacuum to improve pump efficiency while minimizing the chance of pulling contamination from the bottom of the reservoir and into the steering system. The inlet (return) size is #6 JIC 37°, and is located on the bottom (below the fluid level). The fluid is pumped through the filter to minimize turbulence and aeration of the fluid.

Reservoir KSF1010 (See pg 31)

The Elixir

The Elixir Racing Power Steering Fluid

With the frequency and pressure of racing power assist being twice that of stock power systems, it's obvious that stock power steering fluid is not adequate. Would you use 10W30 motor oil in a racing engine? Of course not! That is why KSE has developed a power steering fluid designed to handle the stresses of racing power steering.

The Elixir has a higher viscosity index, anti-foaming, anti-wear, and anti-oxidation capabilities to handle the racing power steering stresses. The Elixir will minimize power assist fade, low-corner-speed assist loss, and decrease heat generation. We also have made the color a "cool" blue to help in identifying oil leak origins.

The Elixir completes the total racing power steering system. When it comes to steering, go with a name you can trust...KSE!
